WSDOT’s Corridor Sketch Initiative is a collaborative planning process with agency partners to identify performance gaps and select high-level strategies to address them on the 304 corridors statewide. This Corridor Sketch Summary acts as an executive summary for one corridor. Please review the User Guide for Corridor Sketch Summaries prior to using information on this corridor:

**SR 24: I-82 Jct (Yakima) to SR 243 Jct**

This 44-mile east-west corridor is located in Yakima and Benton counties. The corridor runs between the Interstate 82 interchange in Yakima across the Vernita Bridge over the Columbia River and the State Route 243 junction. There are also junctions with SR 241 and SR 240, and a Yakima River crossing near I-82. East of the SR 240 junction, the corridor is passes through portions of the Hanford Nuclear Reservation and the Hanford Reach National Monument. The majority of the corridor is rural in character with agriculture and open rangeland being the primary land uses. From Yakima through Moxee, the corridor is urban in character and experiencing significant residential and industrial growth. The agricultural lands include irrigated fields and major high-value hop fields intermixed with dry grass and shrub-steppe vegetation. The terrain along the corridor is generally flat from Yakima to the SR 241 junction passing through the Moxee and Black Rock Valleys. There are steep grades between SR 241 and SR 240, and from SR 240 to the Columbia River Plain.

**Current Function**

SR 24 is an east-west highway connecting Yakima to Othello within the Columbia Basin in south central Washington. The corridor is both an urban and a rural arterial, and is an important freight and farm-to-market route. It connects agricultural products grown in the Yakima Valley, Moxee Valley, and the Wahluke Slope (Mattawa area) within the Columbia Basin. The corridor is an important commuter route between Moxee and the Moxee Valley to the greater Yakima area, and between Yakima and U.S. Department of Energy Hanford site. Commuters use the corridor to access industrial facilities in Moxee, nearby agricultural and ranching lands, and employment in Yakima. This corridor provides one of only two east-west Yakima River crossings between Selah Gap and Union Gap, and a critical Columbia River crossing on the Vernita Bridge, one of only a limited number of crossings. Recreational traffic uses the corridor to access the Hanford Reach National Monument.

**Future Function**

Based on the projected population, land use, and economic trends, the future function of this corridor is expected to remain the same.
Highlights and Performance

This section of SR 24 is a two-lane, undivided highway. It has four lanes for a short distance at the I-82 interchange and across the Yakima River. The highway has several signalized intersections with turn lanes at major intersections. There are truck climbing lanes on the steep grade between SR 241 and SR 240. The annual average daily traffic on this corridor is highest at the I-82 junction in Yakima and lowest west of the SR 241 junction.

What’s working well?

- All of the surveyed pavements on the corridor are in fair or better condition.
- The grading and curvature of the roadway are mostly gentle, enhancing driver safety.
- The new Yakima River Bridge has improved mobility on the corridor, as well as resiliency against flooding.
- The park and ride lots along the corridor are very well-utilized.
- Roughly 10% of the corridor experiences congestion on a daily basis.
- The mobility of pedestrian and cyclist traffic is occasionally impeded along the corridor’s urban areas.
- Eight miles of the corridor have a medium priority habitat connectivity issue.
- Increasing traffic volumes have led to congestion at most intersections on the western end of the corridor.

WSDOT monitors the state system in ongoing efforts to track asset performance. For this corridor, WSDOT finds:

<table>
<thead>
<tr>

</tbody>
</table>

What needs to change?

- Roughly 10% of the corridor experiences congestion on a daily basis.
- The mobility of pedestrian and cyclist traffic is occasionally impeded along the corridor’s urban areas.
- Eight miles of the corridor have a medium priority habitat connectivity issue.
- Increasing traffic volumes have led to congestion at most intersections on the western end of the corridor.

WSDOT collected feedback from agency partners. Key themes included:

- Interest in expanding the portion of the corridor between the cities of Moxee and Yakima in order to promote mobility and economic vitality.
- Concern about the combined impact of a preexisting low level of service along the Moxee section of the corridor and seasonal agricultural freight.
- A desire to explore ways to overcome current and expected future habitat connectivity issues.
- Emphasis on reducing particulate matter emissions by managing levels of congestion and environmental controls on any forthcoming projects.
- Interest in creating a shared-use path between Yakima and Moxee to provide a non-motorized travel alternative between the two communities.

What we heard from our partners

WSDOT monitors the state system in ongoing efforts to track asset performance. For this corridor, WSDOT finds:

What we heard from our partners

WSDOT collected feedback from agency partners. Key themes included:

- Interest in expanding the portion of the corridor between the cities of Moxee and Yakima in order to promote mobility and economic vitality.
- Concern about the combined impact of a preexisting low level of service along the Moxee section of the corridor and seasonal agricultural freight.
- A desire to explore ways to overcome current and expected future habitat connectivity issues.
- Emphasis on reducing particulate matter emissions by managing levels of congestion and environmental controls on any forthcoming projects.
- Interest in creating a shared-use path between Yakima and Moxee to provide a non-motorized travel alternative between the two communities.
**Strategies**

WSDOT identified the following strategies and associated actions to keep the corridor working well and address performance gaps. Regional partners collaborated on high-level mobility strategies. The identified strategies are not meant to be all-inclusive, nor an established list of priorities. Further evaluation is needed before any strategy can be recommended as a solution to address performance. Project funding decisions will take place at the programming phase, and are subject to statewide prioritization. For more strategy information, visit the Corridor Sketch Summary User Guide.

</table>
The westbound SR 24 off-ramp to northbound I-82 are congested during afternoon peak times. The northbound I-82 off-ramp also experiences operational issues as it merges with eastbound SR 24 traffic and only has 300 feet before needing to merge due to the right-turn only lane.

The S 24th Street intersection experiences congestion during morning and afternoon peak times. Except for the north leg, all the legs have dedicated left-turn and right-turn lanes.

**Corridor Segment Characteristics**
- This segment of SR 24 is on the National Highway System and is designated a Highway of Statewide Significance.
- The average daily traffic ranged from 21,000 to 23,000 in 2015.
- This segment of SR 24 is a Freight Economic Corridor with freight tonnage 5.8 million tons per year and accounted for 7% of the traffic in 2015.
- The speed limit is 35 mph.
- SR 24 is a limited access highway within the mobility corridor segment.
- The shoulder is available for bicycle and pedestrian use.
- No transit service is available.

**Contributing Factors**
- The growth of affordable housing and industrial uses in Moxee contributes to growing traffic volumes at the interchange.
- The short distance between the on-ramp to eastbound SR 24 from northbound I-82 and a right-turn only lane at S 24th Street results in weaving and slowdowns.

**Mobility Strategies:**

**Operational Improvements**
- Evaluate coordinating traffic signals on SR 24 and Nob Hill Boulevard to provide traffic flow continuity for eastbound and westbound traffic.

**Demand Management**
- Offer the Commute Trip Reduction program to employers in the congested corridor to reduce demand during peak times and improve mobility on the highway. Although outside the westbound ramps, it may reduce trips through the interchange.
- Expand the existing park and ride lots that are nearing capacity to increase the number of shared-ride users to reduce congestion. Although outside the westbound ramps, it may reduce trips through the interchange.

**Local Network Improvements**
- Consider constructing a separate bicycle and pedestrian path along the SR 24 corridor, extending the path from the existing Yakima Greenway to Moxee to improve facilities for non-motorized users. Although outside the westbound ramps, it may reduce trips through the interchange.

**Further Study**
- Evaluate options to increase throughput through the intersection which is currently signalized.
The segment from University Parkway to Faucher Road is congested during morning and afternoon peak times. Three of the park and ride lots are nearing capacity.

**Corridor Segment Characteristics**
- This segment of SR 24 is on the National Highway System and is designated a Highway of Statewide Significance.
- The traffic ranged from 19,000 vehicles at 24th Street to 6,400 vehicles at Faucher Road in 2015.
- This segment of SR 24 hauls 2.9 million annual tons of freight, and accounted for 13% of the traffic in 2015.
- The speed limit is 55 mph.
- SR 24 is a limited access highway within the mobility corridor segment.
- The shoulder is available for bicycle and pedestrian use.
- No transit service is available.

**Contributing Factors**
- The growth of affordable housing and industrial uses in Moxee contributes to growing traffic volumes.
- Trucks and other slow vehicles slow significantly climbing the Vernita grade from the Columbia River plain and there is no auxiliary lane to accommodate them.

**Mobility Strategies:**

**Operational Improvements**
- Construct a separate non-motorized path from Yakima to Moxee to reduce user conflicts and improve mobility.
- Restripe the existing pavement to provide a reversible lane or an additional lane in one direction, in order to reduce congestion and improve mobility.

**Demand Management**
- Offer the Commute Trip Reduction program to employers in the congested corridor to reduce demand during peak times and improve mobility on the highway.
- Expand the existing park and ride lots that are nearing capacity to increase the number of shared-ride users to reduce congestion.

**Local Network Improvements**
- Construct separate southbound right-turn and left-turn lanes at the SR 24/Birchfield Road intersection to reduce congestion.
- Consider constructing a separate bicycle and pedestrian path along the SR 24 corridor, extending the path from the existing Yakima Greenway to Moxee to improve facilities for non-motorized users.

**Further Study**
- Look into improvements between University Parkway and Faucher Road to reduce congestion and increase economic vitality.

Washington State Department of Transportation’s Corridor Sketch Initiative is a set of planning activities that engage our partners to define the context and performance information for all of the state’s 304 highway corridors. The Corridor Sketch complements and supports regional planning processes in Washington. It is not intended to duplicate, substitute or compete with other planning efforts; nor is it intended to generate lists of projects.

Under 23 U.S. Code § 148 and 23 U.S. Code § 409, safety data, reports, surveys, schedules, lists compiled or collected for the purpose of identifying, evaluating, or planning the safety enhancement of potential crash sites, hazardous roadway conditions, or railway-highway crossings are not subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data.

Americans with Disabilities Act (ADA) Information
Individuals requiring reasonable accommodations may request written materials in alternate formats, sign language interpreters, physical accessibility accommodations, or other reasonable accommodations by contacting the event sponsor (enter name of event sponsor and phone number), by (insert date-usually two weeks advance notice). Persons who are deaf or hard of hearing may contact the event sponsor through the Washington Relay Service at 7-1-1.

Title VI Statement to Public
It is the Washington State Department of Transportation’s (WSDOT) policy to assure that no person shall, on the grounds of race, color, national origin and sex, as provided by Title VI of the Civil Rights Act of 1964, be excluded from participation in, be denied the benefits of, or be otherwise discriminated against under any of its federally funded programs and activities. Any person who believes his/her Title VI protection has been violated may file a complaint with WSDOT’s Office of Equal Opportunity (OEO). For Title VI complaint forms and advice, please contact OEO’s Title VI Coordinator at (360) 705-7098.

Información del Acta (ADA) de Estadounidense con Discapacidad
Este material se puede hacer disponible en un formato alternativo por correo electrónico al equipo de Asuntos de diversidad/ADA WSDOT en wsdotada@wsdot.wa.gov o llamando gratis, 855-362-4ADA (4232). Personas sordas o con problemas de audición pueden solicitar llamando el relé de estado de Washington al 711.

Notificación de Título VI al Público
Es la política de el Departamento de Transportación del Estado de Washington de asegurar que ninguna persona sea excluida de participación o sea negado los beneficios, o sea discriminado bajo cualquiera de sus programas y actividades financiado con fondos federales sobre la base de raza, color, origen nacional o sexo, como proveído por el Título VI de el Acto de Derechos Civiles de 1964. Cualquier persona que cree que sus protecciones de Título VI han sido violadas, puede hacer una queja con la Oficina de Igualdad de Oportunidades (OEO). Para información adicional con respecto a procedimientos de quejas de Título VI y/o información con respecto a nuestras obligaciones sin discriminación, por favor de comunicarse con le Coordinador de Título VI de la Oficina de Igualdad de Oportunidades (OEO) (360) 705-7082.
